

# Your Planting Season Checklist

Planting season can be tricky. You have to get your fields, equipment and crew ready for when the time and weather is right. Luckily, FieldView™ can help you measure, track and manage every move of the planting season.

Unlock the power of data on your farm. Scan to explore hardware that makes data collection easier and more efficient.

- 1 Check Compatibility**

First, check if your equipment is compatible with the FieldView™ Drive or FieldView™ Drive 2.0. Go to [support.climate.com](https://support.climate.com) and search "Planting and Seeding Compatibility" for a list of compatible planters and seeders.
- 2 Confirm Field Boundaries**

Before you head to the field, make sure your boundaries are exactly where they should be. If your field boundaries are already mapped, it's always a good idea to double check them.
- 3 Pre-Load Seed Names**

You want to know exactly what worked and what didn't after harvest. Having precise harvest data starts with collecting precise planting data. Pre-loading seed names into FieldView, eliminates the risk of mislabeling or forgetting which seed was planted where.
- 4 Update FieldView™ Cab App**

Download or update the FieldView™ Cab app in the iOS App Store® or the Google Play Store.
- 5 Run CloudSync**

Ensure CloudSync is enabled in the FieldView Cab app. This step makes sure you're ready for yield analysis and other features, and protects you against losing any data.
- 6 Set Up Planting Equipment**

If you have a self-propelled, pull type or air seeder, there are specific steps to make sure it's connected to FieldView.
- 7 Install FieldView™ Drive 2.0**

If you have compatible equipment, installing the FieldView Drive 2.0 only takes a few minutes and makes data collection automatic and seamless.

## Questions? Get in touch!

The Support Team will be working extended hours along with you to solve problems and get you back in the field. We're here to help! Call us at 888-924-7475.
